

Portfolio Website — Build Documentation

Assignment 1: Build & Host Your Personal Portfolio Website

1. Student Details

Name	Dia Sharma
SAP ID	590026300
Batch	Batch 5
Program	B.Tech Computer Science & Engineering (Core)
Year	Second Year
University	University of Petroleum & Energy Studies (UPES)
Date	10 September 2026

2. Template / Starting Point

Built entirely from scratch — no HTML/CSS template, theme, or AI-generated boilerplate was used as a base. The page structure, styling system, and JavaScript were written specifically for this assignment based on a custom design plan (color palette, typography, and layout concept) created for this project.

3. AI Tools Used

Tool: Claude (Anthropic), Claude.ai chat interface.

What it was used for:

- Drafting the overall site structure and section layout based on the assignment brief.
- Generating the design system: color palette, font pairing (Space Grotesk / IBM Plex Sans / IBM Plex Mono), and layout concept.
- Writing the full HTML, CSS, and JavaScript code for the site (index.html, styles.css, script.js).
- Drafting placeholder copy (bio, headline, project descriptions) based on details and project titles I provided, which I then reviewed and can further personalise.
- Generating this documentation file (structure and formatting) from the details of the build process.

All AI-assisted output (code and copy) was reviewed before use. Personal details, contact information, project titles, and photo are my own and were provided by me.

4. Prompts Used

The following prompts (in order) were used in the Claude conversation to generate this site:

complete this assignment for me and make it ready to submit i am second year btech cse student specialising in core from batch 5 and university name is upes(university of petroleum energy and studies) i have done c,python .html,linux,beginner in java and my sap id is 590026300 [with the assignment PDF and a reference site link attached]

also i would like to mention that u can change the website style make it very believable that it was made by me and list out all the details that u want me to give

[Provided personal details in response to Claude's follow-up questions:] name: dia sharma; email address: diiasharmaa@gmail.com; college id: dia.26300@stu.upes.ac.in; github username: dia06-sh; github link: github.com/dia06-sh; linkedin url; one line headline – make it creative and decide yourself; 3 projects: study time tracker (Python), electricity bill management system (C), resume and website front page for frontend class (HTML) – plus a profile photo.

5. Method / Approach

- Read the assignment brief carefully to list all required sections and the grading rubric.
- Reviewed the shared reference site to understand the expected scope and quality bar.
- Asked for the missing personal details (name, contact info, GitHub/LinkedIn, project list, headline direction) needed to make the content real rather than placeholder text.
- Planned a distinct visual identity (colour palette, type pairing, terminal-inspired hero) instead of a generic template look.
- Built the page section by section in plain HTML, CSS, and vanilla JavaScript: header/nav, hero with an animated terminal mock-up, about, projects (log-style list), contact, and footer.
- Added a responsive layout using CSS Grid/Flexbox with breakpoints for tablet and mobile, plus a mobile nav toggle.
- Wired the footer's "Download Documentation" button to this PDF via a simple download link.
- Generated this documentation file summarising the build.
- Next steps (to be completed before final submission): create the GitHub repository, push all files (index.html, styles.css, script.js, assets/, documentation.pdf), enable GitHub Pages, replace the project repo-link placeholders with real links, and confirm the live site and download button both work.

6. Live Link & Repository

Live site	https://dia06-sh.github.io/portfolio/ (update after enabling GitHub Pages)
GitHub repository	https://github.com/dia06-sh/portfolio (update with actual repo name)

Note: the exact URLs above depend on the repository name chosen at upload time — update both this document and the submission form with the final links.
